Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of the series reflects the broad interests and policies of Fisheries and Oceans Canada, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report. Each report is abstracted in the data base *Aquatic Sciences and Fisheries Abstracts*.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et politiques de Pêches et Océans Canada, notamment la gestion des pêches, la technologie et le développement, les sciences océaniques et l'environnement aquatique, au Canada.

Les rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact figure au haut du résumé de chaque rapport. Les rapports à l'industrie sont résumés dans la base de données *Résumés des sciences aquatiques et halieutiques*.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement d'origine dont le nom figure sur la couverture et la page du titre.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

ABSTRACT

Paulin, G., D. Gagnon. and M. Comeau 2014. Coastal temperature monitoring program from 2010 to 2013: southern Gulf of St. Lawrence. Can. Data Rep. Fish. Aquat. Sci. 1255: x + 898p.

Bottom and surface water temperatures were monitored in coastal waters of the southern Gulf of St. Lawrence using electronic recording devices attached to navigational buoys or moorings and set to record every two hours from month to month. The data collected are presented as the mean daily temperature and monthly-accumulated degree-days for each sampled station.

Key words: water temperature, environmental parameter, marine environment, oceanography.

RÉSUMÉ

Paulin, G., D. Gagnon. and M. Comeau 2014. Coastal temperature monitoring program from 2010 to 2013: southern Gulf of St. Lawrence. Can. Data Rep. Fish. Aquat. Sci. 1255: x + 898p.

Les températures de l'eau de fond et de surface dans les eaux côtières du sud du golfe du Saint-Laurent ont fait l'objet d'un relevé avec des enregistreurs électronique de températures attachées aux bouées d'aide à la navigation ou des stations d'amarrage fixe. Les températures étaient enregistrées à tous les deux heures et ceci de mois en mois. Les données recueillies sont présentées en température moyenne journalière, sous forme de tableaux et figures, et l'accumulation de degrés jours mensuelles pour chaque station.

Mots clés : température de l'eau, paramètre environnemental, environnement marin, océanographie.

1.0 INTRODUCTION

In 1995, a coastal temperature monitoring program was initiated by the Lobster Section of the Department of Fisheries and Oceans (DFO) in Moncton, New Brunswick (N.B.). The objective of the program is to gather environmental coastal data to better understand fluctuations in water temperature and its effect on coastal marine species. Data will benefit oceanographers and other research scientists interested in water temperature regimes.

Water temperature data were collected from coastal waters in N.B., Prince Edward Island (P.E.I.) and the Gulf shore of N.S.. Data collected before 2010 are available in Lanteigne et al. (1996), Savoie et al. (2002), Savoie and Lanteigne (2002), Savoie and Comeau (2004) , Paulin et al. (2005), Paulin and Gagnon (2008) and Paulin et al. (2011). Data collected between 2010 and 2013 from the coastal temperature monitoring stations across the southern Gulf of St. Lawrence (sGSL) are presented in this report.

2.0 MATERIALS AND METHODS

Programmable electronic Vemco 8-bit Minilog TR data logger™ were used for recording the water temperature during this monitoring program. Each data logger has been initialized to record a water temperature reading every two hours. The minimum and maximum range of each data logger is -5 to +35°C with an accuracy of ± 0.3°C and a resolution of 0.2°C. Specifications for the data loggers are described in Lanteigne et al. (1996).

From 2010 to 2013, most of the data loggers have been deployed by the Canadian Coast Guard (CCG) who installed the data loggers on some of their navigational buoys in the sGSL. DFO scientific staff and harvesters were also responsible for deploying and retrieving some of the data loggers.

The data loggers launched by CCG were mounted in a steel protective housing unit, as described in Savoie et al. (2002), which is attached to the mooring system of the navigational buoys at approximately one meter from the sea floor. Also, four of the navigational buoys were fitted with data loggers measuring the temperature approximately 2 m from the surface. These sites were: Shippagan N.B., Escuminac N.B., Malpeque P.E.I. and Pleasant Bay N.S.. Most of the data loggers launched by DFO personnel or harvesters were also set approximately 1 m from the seafloor on independent mooring systems which consisted of an anchor, anchor line and buoy (Dobson and Petrie 1985). From 2010 to 2012 additional probes were attached to experimental lobster traps as part of a scientific study and set approximately 0.25 m from the seafloor bottom. The lobster traps remained untouched and at the same location for the entire soak time period. These sites were in P.E.I. (Alberton, Covehead, Fortune, Murray Harbour Nine Mile Creek, Skinner's Pond, Wood Islands), N.B. (Caraquet, Cocagne) and N.S. (Arisaig). In addition, one station consisted of three probes set at different depths on a ship wreck located in Anse Bleue, N.B..

For the most part, the deployment of the devices was done in early spring (April - May) depending on the ice condition in the sGSL. Retrieval usually took place late fall of the same year (November - December) by CCG or earlier by DFO personnel or harvesters. Once recovered, the data loggers were brought to DFO where the data was retrieved, formatted and added to the database.

The water depth of the CCG monitoring stations was provided by the CCG while the geographic positions (latitude and longitude) were taken from the Atlantic Coast List of Lights, Buoys and Fog Signals (CCG 2013). DFO personnel or harvesters recorded the latitude and longitude together with the depth of water when deploying their respective data loggers.

Each year, a number of data loggers are lost which can be attributed to equipment failure such as shackle, chain or cotter pin breaking off from the mooring system of the navigational buoys (CCG). Steel cotter pins are no longer in usage having been replaced by stainless steel to overcome breaking off due to rust.

Some of the moorings set by harvesters or DFO personnel also went missing due to environmentally related events or gear failure such as rope or buoy breaking off.

Once retrieved the minilogs are downloaded using a portable reader and saved in a excel spreadsheet. The temperature data is then verified for irregularities and saved as individual files for each site. Additional information such as minilog serial number, location, coordinates, depth and date are also included in the files. Although the raw data is kept on a separate spread-sheet, only the complete soak days are considered for the analysis. Generally, the set and retrieved dates are considered incomplete and not included in the analysis. The complete soak day files are then imported into a Microsoft ACCESS database where sub routines have been created to analyze and tabulate the final results.

3.0 DATA PRESENTATION

A general overview of the monitoring station locations are presented in Figures 1 to 4. The positions and water depth for each temperature monitoring station are presented in Tables 1 to 4. The complete data sets are presented in Appendices A to D for 2010 to 2013, respectively. Tabulated results in the appendices for each site includes daily mean temperatures, standard deviations, daily minimum and maximum temperatures as well as accumulated daily and monthly degree-days relative to 0°C and 4°C. One yearly graph is presented for each location showing the daily mean temperatures together with the actual water depth of the data logger. Analysis presented in tables and graphs are presented for bottom water temperature and the surface water temperature (where available).

The accumulated degree-days (*ADD*) were calculated using the following equation:

$$ADD=\sum(T-T_{ref}) \times Time$$

Where T = mean daily temperature
T_{ref} = reference temperature (0°C and 4°C)
Time = time period in days

The equation is true where $T < T_{ref}$, if not then $T - T_{ref} = 0$.

4.0 ACKNOWLEDGEMENTS

The authors would like to thank Sterling Wright and his staff at the Canadian Coast Guard Base in Charlottetown for their support and ongoing help in the deployment and retrieval of the temperature recorders. Also many thanks to all the harvesters who have volunteered their time and material to prepare and deploy some of the moorings.
